

TABLE 3

## FUNCTIONAL SITE TYPE CHARACTERISTICS

Site Type	Characteristics
macro-band base camp	wide variety of tool types; abundant ceramics; house structures (semi-subterranean); storage pit features; large size (hectare or larger); abundant debitage from tool reduction and manufacture. <u>Examples:</u> 7NC-A-2 (Custer and DeSantis 1985), 7NC-E-6 and 7NC-E-1 (Custer 1982), 36CH3 (Wilkins 1978), 36CH51 (Custer 1985), 18CE29 (Thomas 1982)
micro-band base camp	same characteristics as above, except size is less than .5 hectare. <u>Examples:</u> Green Valley Site Complex (Custer <u>et al.</u> 1981), Morgan Bank Site Complex (Custer, Watson, and DeSantis n.d.)
procurement staging site	small size (less than .5 hectare), limited tool types, limited ceramics, limited debitage, limited tool reduction and manufacture, processing features (hearths and shallow pits), limited house structures (tent ring). <u>Examples:</u> 7NC-E-46 (Custer and Bachman 1984)
procurement site	small size (less than .25 hectare), very small amounts of debitage, almost no evidence of tool manufacture, limited tool reduction, no ceramics, no processing or habitation features. <u>Examples:</u> 7NC-D-114 (Catts, Shaffer, and Custer 1985), Limestone Hills Site Complex (Custer 1980)
